Routledge Handbook of Ecosystem Services

Edited by Marion Potschin, University of Nottingham, UK, Roy Haines-Young, University of Nottingham, UK, Robert Fish, University of Exeter, UK and R. Kerry Turner, University of East Anglia, UK

The idea that nature provides services to people is one of the most powerful concepts to have emerged over the last two decades. This handbook provides a comprehensive reference text on ecosystem services, integrating natural and social science (including economics). Collectively the chapters, written by the world’s leading authorities, demonstrate the importance of biodiversity for people, policy and practice.

“This handbook, written by world class academic and policy experts, is long overdue, and provides a much-needed guide to address this challenge. It is an authoritative reference text written in easy to read sections that is essential reading for academics, decision-makers and civil society.”
– from the Foreword by Sir Robert Watson, Professor of Environmental Sciences, University of East Anglia, UK
